The present sequence represents Tir, a novel translocated intimin receptor (formerly termed Hp90) from an enterohaemorrhagic scherichia coll (EHEC) strain. The sequence was deduced from an isolated tir polynucleotide (see AAX58859). Tir proteins are secreted by attaching and effacing pathogens such as EHEC and EPEC (see AAY06220) E. coli. The bacterial pathogens insert their own creceptors into mammalian cell surfaces, to which the pathogen then adheres to trigger additional host signaling events and actin nucleation. Diagnosis of disease caused by pathogenic E. coli can be performed by use of antibodies that bind to Tir to defect the protein or the use of antibodies that bind to Tir to defect the protein or the use of nucleic acid probes for detection of nucleic acids encombinant method for producing recombinant Tir, and a kit for the detection of Tir-producing E. coli are provided. A method of immunising a host in addition, Tir fusion proteins can be used in attenuated E. coli in addition, Tir fusion proteins can be used in attenuated E. coli in didition, Tir fusion proteins can be used in attenuated E. coli interfere with the binding of bacterial pathogens to their perpendents is also provided. Interfere with the binding of bacterial pathogens to their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RINGIQISVVXSTIQHPPRDTTDNGARLLGNPSAGIQSTVARLALSGGLRHDMGGLTGGS 540

The present sequence represents Tir, a novel translocated intimin receptor (formerly termed Hp90) from an enteropathogenic receptor (formerly termed Hp90) from an enteropathogenic scheduling to the sequence was deduced from an isolated tir polynucleotide (see AAX58858). Tir proteins are secreted by attaching and effacing pathogens such as EPEC and EHEC secreted by attaching and effacing pathogens such as EPEC and EHEC (see AAX06221) E. coli. The bacterial pathogens insert their own cacheres to trigger additional host signaling events and actin uncleation. Diagnosis of disease caused by pathogenic E. coli can nucleation. Diagnosis of antibodies that bind to Tir to defect the protein or the use of antibodies that bind to Tir to defect the protein or the use of nucleic acid probes for detection of nucleic acids encodaing Tir polypeptide. Isolated Tir nucleic acids, Tir peptides, a recombinant method for producing recombinant Tir, and a kit for the detection of Tir peptides, a recombinant method for producing recombinant Tir, and a kit for the detection of Tir unduce a protective immune response is also provided. In addition, Tir fusion proteins can be used in attenuated E. coli to induce a cell-mediated immune response to other polypeptides, continue in the the binding of bacterial pathogens to their polyperial pathogens to their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New translocated intimin receptor useful for treating infection by enteropathogenic or enterohemorrhagic Escherichia coli
                                                                                                                                                                                                                                                                                                                                                                                                   "given as Xaa in the specification; Lys is deduced from the DNA sequence"

The present invention describes a method of screening for an inhibitor of intimin binding to eukaryotic cells. The method comprises exposing an intimin polypeptide having a Tir-independent cell binding activity to test agents, and obtaining an inhibitor based on its ability to bind the polypeptide. The inhibitors are used in the prevention, treatment and/or aliagnosis of bacterial infections, preferably by enteropathic and/or enterobaemorrhagic Escharichia coll, Shiga toxigenic E. coll, Hafnia alvei or Citrobacter freudil, Or especially E. coll ol5:Hy. The infections cause a histopathological effect known as attachment and effacement on intestinal epithelial cells. The inhibitors can be used to produce food supplements or additives, especially where the food is a milk substitute. The method can be used to sort cells based on their ability to bind to a Tir independent cell binding domain of an intimin polypeptide. Polypeptides having Tir-independent intimin binding cattle of the present sequence represents a specifically claimed intimin cerminal contributions. The present sequence represents a specifically claimed intimin cerminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

receptor or secreted PRO polypeptides given in AAY99340 to AAA94462. The receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoling then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Wood WI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Watanabe CK,

The present sequence is a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Fong S;
Hillan KJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ELLEPKGTGESKGAGESKGVGELRESNSGAENTTETQTSTSTSSLRSDPKLWLALGTVAT 240

                                          The product has modified properties, e.g. thermostability, alkaline/acid pH stability, oxidative stability, autoproteolysis et compared to the parent protease(s). The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) prepared with the aid of lactic acid bacteria.

This mutant may then be used to prepare hybrid proteases, the fusion being between a type I and a type III protease of L.lactis Wg2 and SK11.

The product has modified properties, e.g. thermostability, alkaline/acid pH stability, oxidative stability, autoproteolysis et compared to the parent protease(s). The proteases can be used for preparing products (butter ofbese, human and animal foodstuffs) see also AAQ10411-17 and AAQ10870-71.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             390 VEQTTTTTTTTTTTSR-----TVENKPANNTPAQGNVD---TPGSEDTMESRRSSM-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The product has modified properties, e.g. thermostability, alkaline/acid pH stability, oxidative stability, autoproteolysis etc., compared to the parent protease(s). The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) prepared with the aid of lactic acid bacteria. See also AAQ10411-17 and AAQ10870-71.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The mutant protease N166D having mew cleavage specificities is obtained by carrying out single amino acid substitutions. This mutant may then be used to prepare hybrid proteases, the fusion being between a type I and a type III protease of L.lactis Mg2 and SK11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB 12; Length 1962;

obtained by replacing two amino acids.

This mutant may then be used to prepare hybrid proteases, this mutant may then be used to prepare hybrid protease of L.lactis Mg2 and SK11.

L.lactis Mg2 and SK11.

The product has modified properties, e.g. thermostability, alloprocessed to the parent protease(s). The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) prepared with the aid of lactic acid bacteria.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mutant protease gene(s) and protease(s) - derived from type I and III protease genes from lactococcal strains, used in fermentation foodstuffs and flavourings
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The mutant protease having mew cleavage specificities is obtained by replacing three amino acids.
This mutant may then be used to prepare hybrid proteases, the fusion being between a type I and a type III protease of L.lactis Wg2 and SKII.
The product has modified properties, e.g. thermostability, alkaline/acid pH stability, oxidative stability, autoproteolysis compared to the parent protease(s). The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) prepared with the aid of lactic acid bacteria.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 obtained by replacing three amino acids.
This mutant may then be used to prepare hybrid proteases, the fusion being between a type I and a type III protease of L.lactis Wg2 and SKII.

The product has modified properties, e.g. thermostability, alkaline/acid pH stability, oxidative stability, autoproteolysis etc., compared to the parent proteases(s). The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) prepared with the aid of lactic acid bacteria.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The product has modified properties, e.g. thermostability, alkaline/acid pH stability, oxidative stability, autoproteolysis et compared to the parent protease(s). The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) prepared with the aid of lactic acid bacteria. See also AAQ10411-17 and AAQ10870-71.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        --- ENNAQAQKKYDEQQAKR

                             obtained by carrying out single amino acid substitutions.
This mutant may then be used to prepare hybrid proteases,
the fusion being between a type I and a type III protease of
L.lactis Wg2 and SK11.
The product has modified properties, e.g. thermostability,
alkaline/acid pH stability, oxidative stability, autoproteolysis et
compared to the parent protease(s). The proteases can be used for
prepared with the aid of lactic acid bacteria.

This mutant may then be used to prepare hybrid proteases, the fusion being between a type I and a type III protease of L.lactis Mg2 and SK11.
The product has modified properties, e.g. thermostability, alkaline/acid pH stability, oxidative stability, autoproteelysis etc., compared to the parent protease(s). The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) prepared with the aid of lactic acid bacteria.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 5, Al
